

Cylindrical Metal Fastener with Conical Tip

This metallic fastener has a cylindrical body, a head on one end, and a conical tip on the other. It is used in machinery or industrial applications for joining components securely.

Product Overview

Precision Engineered Fastener

This cylindrical metal fastener is designed for secure component joining in demanding industrial and machinery applications. It features a robust cylindrical body with a specialized head for effective torque application. The distinct gold-colored conical tip suggests a specialized coating or material treatment, engineered for enhanced performance, durability, or corrosion resistance in critical assembly environments.

Technical Details

Surface Treatment

Corrosion Resistant Tip • Multi-Material Construction

Primary Applications

- Industrial Machinery
- Component Assembly
- Secure Fastening

Design Features

Cylindrical Body, Conical Tip, Torque-Ready Head
