

Cylindrical Polymer Component

Cylindrical polymer components designed for engineering applications. These sealed elements have metallic casings and connecting tabs.

Overview

Cylindrical Polymer Component

This cylindrical polymer component is designed for specialized engineering applications, potentially suitable for foreign engineering contracting projects. The unit features a robust, sealed metallic casing with integrated connecting tabs at both ends for secure installation. Its durable construction ensures reliable performance in demanding industrial environments.

Physical Characteristics

Form Factor	Cylindrical
Primary Material	Polymer
Casing Material	Metallic

Design Features

Connection Type	Connecting tabs, Sealed unit
-----------------	------------------------------

Application

Typical Applications

- Foreign Engineering Contracting
- General Engineering
