

# Cylindrical Roller Bearing NUP2214

This single-row cylindrical roller bearing is suitable for high speeds and robust operations. The inner ring has a flange to handle radial loads effectively.

## Product Overview

### High-Performance Cylindrical Roller Bearing

The NUP2214 cylindrical roller bearing is engineered for demanding industrial applications requiring high load-carrying capacity and durability. Designed to handle significant radial loads, this bearing provides robust support and reliability in heavy-duty machinery. Its precision construction ensures smooth operation and extended service life in critical equipment.

Certifications	ISO 9001:2008
