

Cylindrical Roller Bearing NUP309

These cylindrical roller bearings are suitable for high and very high speeds and are robust in operation. The inner ring has a flange to accommodate radial loads even at high speeds.

Product Overview

High-Performance Cylindrical Roller Bearing

Cylindrical roller bearings are precision-engineered to provide exceptional load-carrying capacity and durability for demanding industrial applications. The NUP309 model is designed to handle significant radial loads while maintaining structural integrity. These components are suitable for a wide variety of industrial machinery and equipment, ensuring reliable operation under heavy-duty conditions.

Product Details

Bearing Type	Cylindrical Roller Bearing
Model Number	NUP309
Certifications	ISO 9001:2008

Compatibility

Available Series

- NU Series
- NJ Series
- NUP Series
- N Series
- NF Series
