

Cylindrical Valve with Conical Top

This is a cylindrical valve. It features a red conical top and a clear tube extending from the top.

Overview

Precision Engineering

This cylindrical valve features a distinct conical top design, engineered for reliable performance in industrial fluid control applications. The unit combines a durable, non-reflective cylindrical body with a smooth, glossy red conical top for easy visual identification. A precision-engineered clear tube with a metallic ring fitting extends from the top, ensuring clear flow monitoring and secure connections.

Physical Characteristics

Body Finish	Solid, non-reflective matte
Top Design	Smooth, glossy red conical top
Visual Indicators	Clear tubing, Metallic ring fitting, High-visibility red cone

Design Features

Key Design Features

- Cylindrical valve architecture
- Conical flow-control top
- Integrated clear monitoring tube
- Reinforced metallic connection point
