

D85 Excavator Track Idler

The D85 Idler is a heavy-duty component designed for track-type tractors and construction equipment, providing critical support and guidance to the track. Its robust design withstands harsh operating conditions, extending service life and minimizing downtime.

Product Overview

Heavy-Duty Track Idler for D85

This D85 track idler is a critical undercarriage component engineered for heavy-duty tracked machinery, including bulldozers and excavators. Constructed from high-strength alloy steel using advanced forging technology, it provides superior support and guidance for track systems. Designed to withstand abrasive conditions and high loads, this component ensures smooth machine operation and extended service life in demanding construction and mining environments.

Technical Specifications

Material	50MN Alloy Steel
Manufacturing Process	Forging
Certifications	ISO 9000, ISO 9001:2000

Logistics & Packaging

Packaging	Pallet / Wooden Case
