

Data Communication Modem

This modem enables data transmission across various communication channels. It allows devices to establish network connections for internet access and data exchange.

Product Overview

Data Communication Modem Components

This collection of high-precision electronic modem components is designed for robust data communication systems. The set includes shielded modules and integrated circuit boards, featuring coaxial connectors suitable for cable or satellite internet infrastructure. Engineered for reliability, these components support various configurations to meet specific connectivity requirements.

Technical Specifications

Included Model Variants

- DBS-MU027
- DBS-MU0401
- DBS-MU201
- DBS-SU041

Component Type

Shielded Module • Circuit Board • Coaxial Connector

Production Dates

2009-07-15, 2009-06-22
