

Data Integration Software

This software provides a unified system entry point and integrated information integration interface for users. It integrates data from different systems to achieve cross-system data exchange.

Product Overview

Integrated Data Management Solution

This software serves as a comprehensive system entry point that streamlines information integration across disparate platforms. It enables seamless cross-system data exchange and offers robust management features, including unified user and permission controls. Designed for security and efficiency, the platform provides flexible workflow creation and versatile communication capabilities.

System Capabilities

Core Features

- Unified system entry point
- Cross-system data exchange
- Integrated information interface
- Flexible workflow creation
- Security protection system

Management & Security

Access & Permissions

Unified User Management, Permission Management, Security Protection

Communication Methods

Supported Channels

Email • SMS • Instant Messaging
