

Data Security Solutions

These solutions safeguard digital assets through encryption, access controls, and threat detection. They provide a robust defense against data breaches and ensure compliance with data protection regulations.

Product Overview

Professional Information Security Solutions

These advanced information security products are designed to meet the rigorous demands of government, military, and telecommunications network infrastructures. The suite includes high-performance firewalls, VPN solutions, and specialized encryption/decryption hardware. Engineered for reliability, these solutions are officially qualified and recommended by leading national information technology security evaluation centers and public security authorities.

Product Portfolio

Available Solutions

- Firewall Systems
- Virtual Private Network (VPN) Solutions
- Encryption/Decryption Hardware

Compliance & Certification

Compliance Standards

Office of Security Coding for Commercial Administration Qualified, China Information Technology Security Evaluation Center Authorized, Ministry of Public Security Recommended

Target Applications

Primary Sectors

Government • Military • Telecommunications
