

Data Transmission Network Communication Device

This network communication device is designed for reliable data transmission and network management. It features multiple indicator LEDs for status monitoring, an emergency stop button, and various input/output ports for versatile connectivity.

Product Overview

High-Performance Data Transmission

This network communication device is engineered for reliable data transmission and efficient network management in demanding industrial environments. It features a robust, ventilated enclosure designed for optimal thermal management and long-term durability. Equipped with essential status monitoring indicators and safety controls, it provides a versatile solution for complex connectivity requirements.

System Status

Indicator LEDs

- Network V 2.0
- System
- Run
- Error

Safety and Control

Safety Features

Emergency Stop Button, Thermal Management Enclosure

Connectivity

Port Configuration

Input Ports • Output Ports
