

# Deep Cycle Flooded Lead Acid Battery

This deep cycle flooded lead acid battery is commonly used in applications requiring sustained power delivery, such as electric vehicles and solar power systems. It is designed for repeated charge and discharge cycles without significant degradation.

## Product Overview

### Deep Cycle Flooded Lead Acid Battery

This deep cycle flooded lead acid battery is engineered for applications requiring consistent, sustained power delivery over extended periods. Designed to withstand repeated charge and discharge cycles without significant degradation, it is an ideal energy storage solution for electric vehicles, solar power systems, and marine equipment. The robust construction ensures durability and reliability in demanding operational environments.

## Technical Specifications

### Cycle Capability

Deep Cycle

### Key Design Features

- Multi-cell series configuration
- Vent caps for gas release
- Durable protective plastic casing
- Standard electrical terminals

### Battery Chemistry

Flooded Lead Acid

## Applications

### Primary Applications

Electric Vehicles, Solar Power Systems, Marine Equipment
