

Deep Cycle Lead-Acid Battery for Electric Vehicles

This deep cycle lead-acid battery is designed for electric vehicles and applications requiring reliable and long-lasting power. The battery provides consistent performance and is built to withstand repeated charge and discharge cycles.

Overview

Deep Cycle Lead-Acid Battery

The 6-DZM-20 is a high-performance deep cycle lead-acid battery engineered specifically for electric vehicles and heavy-duty applications. Designed to withstand repeated charge and discharge cycles, this battery ensures consistent power delivery and operational reliability. It strictly adheres to the JB/T10262-2001 industry standard, guaranteeing quality and safety for professional use.

Technical Specifications

Model Number	6-DZM-20
Executive Standard	JB/T10262-2001

Key Features

Battery Type

Deep Cycle • Lead-Acid • Electric Vehicle Battery

Ideal Applications

- Electric Vehicles
- High-cycle applications
- Reliable power systems
