

Deep Groove Ball Bearing

Deep groove ball bearings offer high limiting speed and low noise. These bearings are manufactured to meet or exceed industry standards.

Overview

High-Precision Deep Groove Ball Bearings

These deep groove ball bearings are engineered for high-performance applications, offering exceptional load-carrying capacity and smooth operation. Designed to minimize friction and noise while maintaining high limiting speeds, they are an ideal choice for electric motors, gearboxes, and pumps. Each unit is manufactured to strict standards to ensure reliability and longevity in demanding industrial environments.

Technical Specifications

Available Series

- 6000 Series
- 6200 Series
- 6300 Series
- 6400 Series
