

Deep Groove Ball Bearing

This deep groove ball bearing features hardened steel races and precision-ground balls. It is designed for smooth operation, handling both radial and axial loads in various applications.

Product Overview

High-Precision Deep Groove Ball Bearings

These deep groove ball bearings are engineered for high-precision industrial applications, featuring hardened steel races and precision-ground balls to ensure smooth and efficient operation. Designed to handle both radial and axial loads, they are suitable for high-speed performance in demanding environments. They are ideal for use in electric motors, pumps, gearboxes, and other critical rotating machinery.

Technical Specifications

Seals Type

ZZ

Structure Type

Deep Groove

Model Number

69721

Precision Rating

P6, P5
