

Deep Well Submersible Pump

This deep well submersible pump is engineered for efficient water extraction. Its durable construction ensures long-lasting operation in demanding environments.

Overview

High-Performance Submersible Solution

The 75HQJD1 deep well submersible pump is engineered for efficient and reliable water extraction across agricultural, industrial, and domestic applications. Constructed with durable, corrosion-resistant materials, this pump ensures longevity even in demanding environments. Its compact design allows for straightforward installation in narrow wells, while the robust motor is optimized for consistent water flow and energy efficiency.

Technical Specifications

Model Number	75HQJD1
Key Features	Corrosion-resistant, Energy-efficient, Robust motor, Compact design

Applications

Suitable Applications

- Agricultural irrigation
- Industrial water supply
- Domestic water extraction
