

Desktop Interphone System with Goose-neck Microphone

This desktop interphone system is designed for two-way communication. It features a gooseneck microphone, a base unit, and a speaker unit suitable for office or commercial environments.

Overview

Professional Desktop Interphone System

The HT-DZII desktop interphone system is designed for clear, reliable two-way communication in office, commercial, and service environments. Featuring a flexible gooseneck microphone and a dedicated base unit, this system ensures high-quality audio transmission for reception desks or security stations. The set includes a separate speaker unit, allowing for seamless interaction between users.
