

Diamond Abrasive Brush Set for Stone Texturing

Diamond abrasive brushes are used to grind stone surfaces, creating textured finishes. These brushes are suitable for achieving antique and leather effects on stone.

Product Overview

Professional Stone Texturing Solutions

These high-quality abrasive brushes are engineered for stone texturing, specifically designed to create antique and leather effects on marble, granite, and concrete surfaces. Utilizing synthetic filaments embedded with either diamond powder or silicon carbide, these brushes ensure consistent grinding performance and long service life. They are versatile tools compatible with automated continuous grinders, handheld polishers, and floor refining machinery.

Technical Details

Available Shapes

- Fickert Brush
- Frankfurt Brush
- Round Brush

Abrasive Materials

Diamond Powder, Silicon Carbide, Stainless Steel

Body Material

Polypropylene

Usage & Applications

Primary Applications

Antique Surface Production • Leather Effect Finishing • Floor Refining • Stone Slab Grinding • Mark Removal

Compatible Equipment

- Automated Continuous Grinders
- Handheld Grinders
- Floor Refining Machines
