

Diamond Coated File Set

This file set is designed for precision material removal and shaping. The durable diamond coating ensures efficient cutting action on hardened steel, ceramics, and glass.

Product Overview

Precision Diamond Coated File Set

This professional-grade diamond coated file set is engineered for precision material removal and intricate shaping. Designed for versatility, these files are highly effective on hardened materials including stainless steel, copper, iron, and aluminum. They are also perfectly suited for delicate grinding and polishing tasks on non-metallic surfaces such as jade, ceramics, and crystal.

Applications

Primary Uses

- Finishing burrs on molds and components
- Model making
- Grinding and polishing artware
- Tool and die making
- Fine detail work

Compatible Materials

Stainless Steel, Copper, Iron, Aluminum, Jade, Ceramics, Crystal

Design Features

Included Shapes

Round • Square • Triangle • Flat
