

Diamond Cutting Blade with Segmented Rim

This diamond cutting blade is designed for precision cutting in industrial applications. The segmented rim ensures efficient material removal, reduces heat buildup, and provides smooth, clean cuts on various materials.

Overview

Industrial Diamond Cutting Blade

The VSM100 series is a professional-grade diamond cutting blade engineered for precision and efficiency in demanding industrial environments. Featuring a specialized segmented rim, this blade facilitates rapid material removal while effectively managing heat buildup during operation. It is an ideal solution for achieving smooth, clean cuts with minimal chipping on a wide range of tough surfaces, including stone, tile, and concrete.

Technical Specifications

Rim Configuration	Segmented
Material Compatibility	Stone, Tile, Concrete

Performance

Primary Advantages

- Reduced heat accumulation
- Efficient material removal
- Minimized surface chipping
- High durability for industrial use
