

Diamond Cutting Blades for Construction Materials

These diamond cutting blades are designed for use on various construction materials, including brick, cement, granite, and tile. They are engineered for efficient and precise cutting, ensuring clean and accurate results in construction and industrial applications.

Product Overview

High-Performance Diamond Cutting Blades

These diamond cutting blades are engineered for professional construction and industrial applications. Designed to handle a wide range of materials with precision, they ensure clean cuts and reliable performance. Ideal for heavy-duty tasks, these blades are a versatile solution for cutting through diverse masonry and stone surfaces.

Applications

Primary Use Cases

- Construction and masonry cutting
- Industrial material processing
- Precision slab and block sizing

Compatible Materials

Normal construction brick, Cement precast block, Cement slab, Granite, Refractory materials, Sandstone, Slate, Tile, Concrete
