

Diamond Edge Profiling Wheel

This diamond profiling wheel is designed for shaping and profiling edges on hard materials. It features a segmented diamond matrix that provides aggressive material removal and a smooth finish.

Product Overview

Professional Diamond Edge Profiling

This diamond profiling wheel is engineered for precision shaping and profiling of edges on hard materials including stone and concrete. It features a specialized segmented diamond matrix that balances aggressive material removal with a smooth, refined finish. Designed for durability and efficiency, the wheel incorporates advanced geometry to facilitate effective cooling and debris removal, ensuring consistent performance during the creation of bullnoses and custom decorative edges.

Performance & Application

Key Features

- Segmented diamond matrix
- Aggressive material removal
- Smooth finish capability
- Efficient debris removal
- Optimized for cooling

Primary Applications

Edge Profiling • Bullnose Creation • Decorative Edging

Compatible Materials

Stone, Concrete, Hard Surfaces
