

Diamond Grinding and Cutting Segments

Diamond segments are engineered for cutting and grinding on various tools. They are available in multiple sizes to meet diverse industrial project requirements.

Product Overview

High-Performance Diamond Segments

These high-quality diamond segments are engineered for optimal performance and durability in demanding industrial environments. Designed to provide superior cutting and grinding capabilities, they are compatible with a wide range of machinery. Their robust construction ensures consistent results, making them an essential component for professional-grade tools.

Technical Specifications

Compatible Applications	Circular Saws, Gang Saws, Grinding Wheels, Tuck Point Blades, Core Drills, Wire Saws
Size Availability	Available in all sizes to suit diverse project requirements
