

# Diamond Grinding Cup Wheel for Concrete Stone

This diamond grinding cup wheel is engineered for aggressive material removal and surface preparation on concrete, stone, and masonry. The segmented design facilitates efficient dust extraction and cooling, which extends the wheel's life.

## Product Overview

### High-Efficiency Grinding Solution

This diamond grinding cup wheel is engineered for aggressive material removal and professional surface preparation. Its segmented design facilitates rapid grinding on concrete, stone, and masonry, while ensuring effective dust extraction and cooling during operation. The robust diamond matrix provides consistent performance and extended tool life, making it an ideal choice for leveling surfaces and removing coatings.

## Technical Specifications

### Key Features

- Aggressive material removal
- Segmented design for cooling
- Optimized for dust extraction
- Durable diamond matrix construction

### Compatible Materials

Concrete, Stone, Masonry

## Usage

### Primary Applications

Surface Grinding • Leveling • Coating Removal
