

Diamond Grinding Cup Wheel for Concrete

Diamond grinding cup wheel designed for concrete and stone grinding. It features segmented diamond grit for aggressive material removal and a durable steel body.

Product Overview

Professional Grinding Performance

This diamond grinding cup wheel is engineered for high-performance surface preparation on concrete and field stone. Designed for use with standard angle grinders, it features segmented diamond grit that ensures aggressive material removal and long-lasting durability. The robust steel body construction, combined with integrated cooling holes, allows for efficient operation, making it an ideal choice for leveling concrete surfaces and removing old coatings.

Technical Specifications

Key Features

- Segmented diamond grit for aggressive grinding
- Durable steel body construction
- Integrated dust extraction and cooling holes
- Designed for angle grinder compatibility

Primary Use Cases

Surface Preparation • Coating Removal • Concrete Leveling

Compatible Materials

Concrete, Field Stone
