

Diamond Grinding Wheel for Hard Materials

This precision diamond grinding wheel is engineered for material removal and finishing. Its metal bond matrix securely holds diamond abrasive particles, ensuring consistent performance and long life.

Product Overview

Precision Diamond Grinding Wheel

This precision diamond grinding wheel is engineered for demanding material removal and finishing applications. Featuring a durable metal bond matrix, it securely holds high-quality diamond abrasive particles to ensure consistent performance and extended wheel life. It is an ideal solution for grinding and shaping hard materials including carbide, ceramics, glass, stone, and composites, offering efficient stock removal and minimal heat generation.

Applications

Compatible Materials

- Carbide
- Ceramics
- Glass
- Stone
- Composites

Industry Usage

Building Materials, Automotive Glass, Furniture Glass, Electrical Glass, Optical Glass

Technical Features

Key Performance Metrics

1 High

Surface Finish Quality

1 Minimal

Heat Generation

Wheel Configuration

Flat wheel
