

Diamond Grinding Wheels

These diamond grinding wheels are designed for concrete, asphalt, granite, marble, and refractory materials. They feature diamond segments for efficient material removal in construction, stone fabrication, and industrial settings.

Product Overview

High-Performance Diamond Grinding Wheels

These professional-grade diamond grinding wheels are engineered for superior material removal and extended service life. Designed for versatility, they are compatible with a wide range of hard surfaces including concrete, asphalt, granite, marble, and refractory materials. Their durable construction and strategic segment placement ensure consistent performance for demanding industrial surface preparation, edge grinding, and polishing tasks.

Application & Usage

Primary Applications

- Surface preparation
- Edge grinding
- Polishing tasks

Compatible Materials	Concrete, Asphalt, Granite, Marble, Refractory Materials
-----------------------------	--

Technical Details

Performance Focus

High Efficiency • Long-lasting • Durable Construction

Segment Design	Strategically placed segments for efficient material removal
