

Diamond Wire Saw for Marble Quarrying

This diamond wire saw is designed for marble mining and concrete cutting applications. It features a screen operating system and a robust frame for stable and precise cutting.

Product Overview

High-Performance Marble Quarrying Solution

This fourth-generation flagship diamond wire saw machine is engineered specifically for efficient marble quarrying and processing. It features an advanced permanent magnet synchronous drive system, delivering superior output torque for demanding industrial environments. Designed with dual supports for the power head, the machine ensures stable, vibration-free operation while providing precise control over cutting paths.

Technical Features

Key Operational Functions

- Inching function for power head rotation
- Inching function for machine moving
- Strong dual-support power head design
- Real-time malfunction diagnostics

Drive Technology

Permanent magnet synchronous drive

Control Architecture

Dual PLC Control, Communication Transmission, Malfunction Display
