

Die-Cast Aluminum Housing for Electronics

Die-cast aluminum housing designed for electronic components requiring robust protection and precise alignment. It features a circular base, vertical ribs, and a machined top surface with three central openings, suitable for use in computer peripherals and monitor applications.

Product Overview

Robust Electronic Protection

This die-cast aluminum housing is engineered to provide superior protection and precise alignment for sensitive electronic components. Its rugged structure, featuring vertical ribs for added reinforcement, makes it ideal for demanding environments. Designed with multiple cylindrical ports and a machined top surface, it ensures high-performance integration in computer peripherals and monitor applications.

Technical Details

Key Design Elements

- Multiple cylindrical ports
- Integrated mounting points
- Vertical structural ribs
- Machined top surface finish

Material	Die-cast Aluminum
----------	-------------------

Applications

Suitable Applications	Computer Peripherals, Monitor Electronics, Industrial Enclosures
-----------------------	--

Design Specifications

Port Configuration	3 Openings
--------------------	------------
