

Diesel Concrete Pump for Construction

The diesel concrete pump is a robust and reliable machine designed for efficient concrete placement in various construction applications. Powered by a high-performance diesel engine, it delivers consistent pumping pressure and flow rates.

Overview

High-Performance Diesel Concrete Pump

This robust and reliable diesel-powered concrete pump is engineered for efficient material placement across diverse construction environments. Featuring a high-performance engine and a durable pumping unit, it ensures consistent pressure and flow rates for demanding projects. Designed with a large-capacity hopper and intuitive controls, it facilitates continuous, precise operation, while its compact, mobile design allows for easy deployment on sites of any scale.

Performance Metrics

Power Source	Diesel Engine
Operational Highlights	High-Volume Pumping, Long-Distance Capability, Continuous Operation, Mobile Design

Safety & Control

Safety Systems

- Overload protection
- Emergency shutdown

Control Interface	User-friendly control system for precise material delivery
