

Diesel Electric Power Generator

This diesel electric power generator features a robust electric motor coupled with a centrifugal pump, all mounted on a sturdy base frame. Designed for high-volume fluid transfer applications, the assembly is painted in a uniform blue color, indicating industrial-grade construction and durability.

Overview

Industrial Diesel Power Solution

This diesel electric power generator is engineered for robust industrial performance. Featuring a durable electric motor coupled with a high-capacity centrifugal pump, the unit is mounted on a sturdy base frame designed for stability and longevity. Its construction is optimized for demanding, high-volume fluid transfer applications, making it a reliable choice for professional operations.

Technical Specifications

Construction	Industrial-grade heavy-duty assembly
Mounting	Sturdy base frame
Application	High-volume fluid transfer, Industrial utility, Diesel power generation

Key Features

Core Components

- Diesel electric motor
- Centrifugal pump
- Reinforced base frame

Durability

Industrial Grade • Heavy Duty
