

Diesel Engine Centrifugal Water Pump Set

This diesel engine centrifugal water pump set is engineered for efficient water transfer. It features a diesel engine coupled with a centrifugal pump, and is mounted on a sturdy frame ensuring reliable performance for irrigation, dewatering, and general water transfer applications.

Overview

Robust Diesel Water Pumping Solution

This centrifugal water pump set is engineered for high-efficiency fluid movement in demanding environments. Driven by a powerful diesel engine, the unit is mounted on a heavy-duty frame to ensure stability during operation. It is an ideal choice for large-scale agricultural irrigation, construction site dewatering, and general industrial water transfer tasks.

Technical Specifications

Drive Configuration	Belt drive system
Surface Coating	Corrosion Resistant, Industrial Paint

Design and Build

Color	Red and Blue
-------	--------------

Application

Primary Applications

- Agricultural Irrigation
- Dewatering
- General Water Transfer
