

Diesel Engine Common Rail Fuel Pump

This fuel injection pump is designed for diesel engines using a common rail system. It provides precise fuel metering for optimal fuel efficiency and reliable performance in demanding operating conditions.

Product Overview

High-Performance Common Rail Fuel Pump

This high-pressure common rail fuel pump is engineered for heavy-duty diesel engines, providing precision fuel metering and optimal efficiency. Designed for reliability under demanding operating conditions, it features a robust housing and corrosion-resistant fittings to ensure long-lasting performance. It is an essential component for maintaining consistent fuel delivery in a wide range of industrial and commercial vehicles.

Technical Specifications

Reference Identifiers

- CY1DY-030376/1
- SX 30076525

Fuel System Type

High-Pressure Common Rail

Construction Features

Precision-Machined, Corrosion-Resistant, Heavy-Duty Housing, Gear-Driven

Compatibility

Compatible Engine Series

ISF2.8, ISF3.8, ISF4.5, ISG11, ISG12, ISX12, QSX15, X15, 4BT, 6BT, 6CT, 6L8.9, ISBE, ISDE, ISLE, ISZ, QSB, QSC, QSL, M11, NT855, K19, K38, N14, A2300, BF4M2012, BF4M1013, BF6M1013, BFM8, TCD2012L4, TCD2013L4, TCD2012L6, TCD2013L6, 1004, 1006, 1104, 1106

Applications

Target Industries

Construction • Machinery • Roadway • Marine

Compatible Equipment

- Excavators
- Tractors
- Bulldozers
- Lifters
- Loaders
- Hoisters
- Forklifts
- Buses
- Boats
- Trucks

Supply Options

Available Part Grades

OEM, Original, Aftermarket
