

Diesel Engine Common Rail Solenoid Valve Y0046G

This diesel common rail solenoid valve is designed for C11, C13, C15, and C18 engines. It is a crucial component for controlling fuel injection in common rail diesel systems.

Product Overview

Engineered for Performance

This diesel common rail solenoid valve is a precision-engineered component essential for modern high-pressure fuel injection systems. Designed for compatibility with C11, C13, C15, and C18 engine models, it ensures accurate fuel delivery and maintains optimal engine efficiency. Constructed from high-speed steel, this unit is built to provide reliable operation and a long service life even in demanding industrial environments.

Technical Specifications

High-pressure fuel injection component featuring a white body and durable black valve tips.

Model Identifier	Y0046G
Component Type	Solenoid valve
Material	High speed steel

Logistics and Trade

Accepted Payment Methods

- T/T
- Western Union
- MoneyGram
- PayPal

Primary Export Markets

North America • South America • Europe • Middle East • Africa • Asia • Australia

Supported Carriers

DHL, FedEx, UPS, TNT, EMS, ARAMEX, Air Freight

Packaging Details

Neutral packing or custom specifications available
