

Diesel Engine for Electric Power Generation

The D series diesel engine is engineered for robust and reliable power generation, designed to meet the demands of electric power applications. It is equipped with advanced fuel injection technology for optimized combustion and reduced emissions.

Product Overview

High-Performance Diesel Engine

The 6D10 series diesel engine is a robust, in-line six-cylinder unit designed specifically for electric power generation. Featuring a water-cooled, four-stroke architecture with direct injection, it delivers reliable performance across industrial power applications. Its design prioritizes power output, fuel economy, and operational longevity, making it an ideal choice for generator sets.

Technical Specifications

Cylinder Configuration	In-line, 6-cylinder
Cooling System	Water-cooled
Combustion Type	Direct injection
Stroke Cycle	4 stroke

Performance Metrics

Power Output Range

182 kW Min Power	315 kW Max Power
----------------------------	----------------------------

Operating Speed Range

1500 r/min Min Speed	1800 r/min Max Speed
