

Diesel Engine Spark Arrester

The spark arrester is designed to eliminate sparks from diesel engines and boilers. It sees widespread application in various vessels, including chemical carriers, oil carriers, and cargo ships.

Product Overview

Industrial Safety Solution

This industrial-grade spark arrester is engineered for the effective elimination of sparks and hot particles in diesel engine and boiler exhaust systems. Designed with robust galvanized metal construction, it ensures reliability in demanding maritime and industrial environments. It provides a essential safety barrier for various vessel types, ensuring compliance and operational safety.

Technical Specifications

Suitable Applications	Chemical Carrier, Oil Carrier, Cargo Ship, Passenger Ship, Container Ship, Engineering Ship, Industrial Boilers
Material	Galvanized metal
Primary Function	Eliminate sparks and hot particles from exhaust systems
