

Diesel Engine Starting Fluid Aerosol

This low-temperature engine starting fluid ensures the quick ignition of diesel engines in cold conditions. It is packaged in an aerosol can and contains volatile compounds that lower the ignition temperature of the fuel-air mixture.

Product Overview

Reliable Cold Weather Performance

This diesel engine starting fluid is specifically formulated to ensure quick and reliable ignition in extreme cold weather conditions. By lowering the ignition temperature of the fuel-air mixture, it facilitates smooth engine starts even in sub-zero environments. The aerosol application method allows for easy and precise use, making it an essential tool for maintaining operational readiness for diesel-powered equipment.

Technical Details

Key Performance Benefits

- Lowers ignition temperature of fuel-air mixture
- Ensures smooth start in sub-zero temperatures
- Engineered to prevent damage to engine components
- Quick and reliable ignition

Application Method	Aerosol spray
Suitable Applications	Diesel Trucks, Construction Machinery, Agricultural Vehicles, Cold Weather Starting
