

Diesel Engine Turbocharger

This turbocharger enhances diesel engine performance by forcing more air into the combustion chamber. It is constructed from durable materials to withstand demanding diesel engine applications.

Product Overview

High-Performance Diesel Turbocharger

This high-performance turbocharger is engineered to significantly enhance engine power and torque output by forcing more air into the combustion chamber. Featuring a robust cast iron turbine housing and advanced aerodynamic design, it ensures optimal airflow and boost response under demanding conditions. The unit is precision-balanced to minimize vibration and noise, while the integrated wastegate actuator allows for precise boost control to maintain optimal fuel economy.

Technical Specifications

Construction Materials

- Cast iron turbine housing
- Advanced aerodynamic compressor housing
- Durable high-temperature resistant components

Reference Identification

8405035, H0005, 08-701

Applications

Compatible Machinery

Bus • Truck • Bulldozer • Excavator • Generator • Tractor • Marine Engine • Construction Machinery

Performance Features

Performance Metrics

1 Included

Wastegate Actuator

1 Verified

Precision Balancing
