

Diesel Engine Water Pump

This diesel water pump provides a reliable solution for water transfer needs. Its diesel engine delivers efficient performance, making it suitable for irrigation, construction, and emergency water removal.

Overview

High-Performance Diesel Water Pump

This robust diesel-powered water pump is engineered for efficient water transfer across demanding applications such as irrigation, construction, and emergency water removal. Featuring a single-cylinder, direct-injection diesel engine, it delivers consistent power and high-volume displacement. Its durable frame design ensures stability and protection, while the self-priming capability and corrosion-resistant components provide long-lasting reliability in challenging environments.

Engine Specifications

Engine Type	Single-cylinder diesel engine
Fuel System	Direct injection
Fuel Type	Diesel

Pump Performance

Key Features

- Self-priming capability
- High-volume displacement
- Corrosion-resistant components
- Capable of handling solids

Ideal Applications	Irrigation, Construction, Emergency Water Removal
--------------------	---

Compliance & Safety

Certifications

CE

Safety Warnings

- Extremely flammable fuel
- Engine safety features included
