

# Diesel Engine Water Pump and Power Generator Set

This dual-use set features a water pump coupled with a generator, powered by a diesel engine. It is mounted on a sturdy frame, designed for applications requiring both water pumping and electricity generation.

## Product Overview

### Dual-Purpose Industrial Utility System

This robust diesel-powered unit offers a versatile solution for agricultural and industrial environments requiring simultaneous or independent water management and power supply. Designed with stability in mind, the system is mounted on a heavy-duty frame to withstand rigorous outdoor operation. It integrates both a water pumping system and electrical generation capabilities into one cohesive, efficient set.

## Technical Specifications

### Build Quality

- Integrated diesel power unit
- Coupled water pump and generator system
- Sturdy industrial frame
- High-stability mounting design

Engine Type	Diesel
Key Functions	Water Pumping, Power Generation
