Overview

High-Performance Diesel Water Pump

The 2-inch diesel engine water pump set is engineered for efficient and reliable water transfer in demanding environments. Designed for versatility, this unit provides the power necessary for high-volume water displacement, making it an essential tool for agricultural irrigation, construction site dewatering, and emergency flood control. Its robust construction ensures long-term durability, while the portable design allows for easy deployment wherever water management is needed.

Technical Specifications

Inlet/Outlet Diameter	2 inch
Engine Type	Diesel
Model	KDP20HS

Key Features

Performance Metrics

2 inch
Port Size

Recommended Applications	Irrigation, Construction, Emergency Dewatering, Water Management
