

Diesel Engine Welding Generator

This diesel engine welding generator provides both electrical power and welding capabilities. It features a 5000-watt rated output with a 4500-watt surge capacity and operates at 50 Hz.

Overview

Versatile Power and Welding Solution

This diesel-powered welding generator is designed to provide reliable dual-function performance for demanding job sites. It seamlessly delivers both electrical power for tools and high-current welding capabilities in a single, robust unit. Equipped with essential safety features and intuitive controls, this generator is built to handle professional tasks efficiently.

Performance

Rated Output

5000 W

Rated Output

4500 W

Surge Capacity

Welding Current Range 70A - 120A

Frequency 50 Hz

Electrical Specifications

AC Output 220V

DC Output 12V 8.3A

Safety Features Oil Alert Lamp, Low Oil Warning, Fuse Protection

Controls and Operation

Control Panel Features

- Starter switch (On/Off)
- Welding current control knob
- Stop/Run lever
- Fuel cock (Close/Open/Decompress positions)
- Positive and negative welding terminals
