

Diesel Engine Welding Generator

This versatile machine combines welding and power generation capabilities. It features a diesel engine driving both a welder and a 12kW generator.

Overview

Dual-Function Power Solution

This high-performance diesel engine welding generator provides a comprehensive solution for mobile construction and maintenance operations. Combining robust welding capabilities with a reliable 12kW power source, it operates independently in remote locations where grid electricity is unavailable. The system is engineered for mobility, featuring a durable wheeled frame for easy maneuverability on job sites.

Technical Specifications

Rated Generator Output

12 kW

Power Capacity

Engine Model	ZH1115ND
Voltage	220 V
Frequency	50 Hz

Design and Utility

Ideal Applications

- Remote field operations
- Construction sites
- Emergency power backup
- Outdoor welding projects

Mobility	Wheeled frame, Portable, Easy maneuverability
