

Diesel Fuel Injection Nozzle DLLA155P1062 for Toyota Common Rail Systems

This diesel fuel injection nozzle is designed for common rail systems in Toyota vehicles. It optimizes fuel atomization and spray processes for enhanced engine performance and reduced emissions.

Product Overview

Close-up of the DLLA155P1062 nozzle showing high-precision engineering for Toyota common rail systems.

High-Precision Common Rail Nozzle

The DLLA155P1062 diesel fuel injection nozzle is engineered for Toyota common rail systems to ensure optimal fuel atomization and combustion efficiency. By precisely managing the spray process, this nozzle contributes to improved engine performance, reduced emissions, and enhanced fuel economy. Designed for durability in demanding automotive environments, it serves as a reliable component for modern multi-cylinder diesel engines.

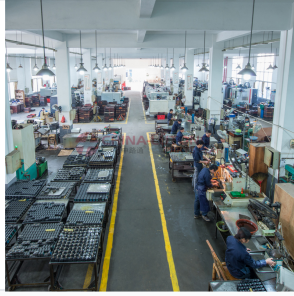

Technical Specifications

The nozzle is designed for efficient fuel atomization and improved engine performance.

Body Material	Steel
Fuel Type	Diesel
Cylinder Configuration	Multi-cylinder
Carburettor Type	Downdraft
Stroke	Standard

Physical Properties

Standard specification nozzle component for diesel fuel injection systems.

Weight

0.04 kg

Quality & Compliance

Certifications

ISO9001, TS16949, ISO 9001:2008, SGS

Warranty

6 Months

Logistics

Transport Package

Diversified Neutral Packing

HS Code

84099199
