

Diesel Generator with Cummins Engine

This generator set is powered by a Cummins diesel engine and operates at 50Hz/60Hz with 230V/400V, 3P, and 0.8pf. It offers a power range from 18kW to 2660kW and includes a control monitor/panel by Deepsea/DEIF/Smargten.

Overview

Industrial Power Solution

This industrial generator is engineered for robust performance, featuring a heavy-duty construction designed for durability in demanding environments. It provides reliable and efficient power generation suitable for backup, prime, or continuous power requirements. Equipped with a comprehensive control panel, the unit ensures ease of operation and monitoring while incorporating essential safety features for equipment and personnel protection.

Performance

Applications

Backup Power, Prime Power, Continuous Power

Features

Key Features

- Heavy-duty construction for durability
- Comprehensive control panel
- Integrated safety systems
- Designed for demanding environments
