

Diesel Heated Electric Drive Pressure Steam Cleaner

This industrial steam cleaner combines diesel heating with an electric drive for effective cleaning. It generates high-pressure steam to remove dirt and stains from various surfaces.

Overview

Industrial Steam Cleaning Performance

This industrial-grade steam cleaner utilizes a diesel-heated system to generate high-pressure steam, effectively creating thermal tension to remove stubborn stains and dirt from surfaces. Designed for heavy-duty applications, it features an electric drive for consistent performance, low noise operation, and a stainless steel heating system for durability. The unit includes advanced safety features such as overheat and over-pressure protection, making it a reliable solution for demanding industrial and commercial cleaning environments.

Technical Specifications

Performance Metrics

17 BAR

Steam Pressure

18 L/H

Min Water Consumption

45 L/H

Max Water Consumption

Model Comparison Table

Feature	CW-DS17A	CW-DS17C
Steam water consumption (L/H)	18-45	18-45
Steam pressure (BAR)	17	17

Key Features

Operating Features

- Adjustable steam dry humidity
- Stainless steel fuel heating system
- Brushless DC motor
- Manual or automatic water feed
- Self-checking system with fault prompts

Safety & Compliance

Integrated Safety Functions

Oil Protection, Water Protection, Over-temperature Protection, Over-pressure Protection, Flame Protection

Applications

Recommended Applications

Industrial Equipment Cleaning • Mechanical Parts Maintenance • Precision Workshops • Commercial Environments • Automotive Detailing • Urban Sanitation • Livestock Facility Cleaning
