Overview

High-Performance Mud Water Pump

This 4-inch diesel-powered mud pump is engineered for demanding environments, specifically designed to handle sewage, slurry, and water with suspended particles. Featuring a robust, wear-resistant construction and an efficient air-cooled diesel engine, it offers exceptional reliability and ease of maintenance. Its compact design, combined with high lift and flow capabilities, makes it an ideal solution for construction sites, agricultural operations, and emergency water management.

Technical Specifications

Rated Power

7.7 kW

Rated Power (kW)

10.5 hp

Rated Power (hp)

Port Diameter	100 mm
Discharge Capacity	102 m³/h
Total Head Lift	30 m

Engine & Performance

Engine Type	Single cylinder, air-cooled, direct injection diesel engine
Starting System	Electric start

Key Advantages

Core Benefits

- High wear resistance for handling mud and slurry
- Low noise and vibration operation
- Fuel-efficient direct injection engine
- Quick-change inlet and outlet pipe joints
- Reinforced pump cover structure
- Compact and lightweight design for portability

Maintenance Features

Open frame direct connection, Maintenance-free aluminum alloy pump body, Reasonable structure design
