

Diesel Power Generating Set

This generating set features a robust diesel engine coupled with a reliable generator. Designed for continuous or standby power applications, it offers exceptional fuel efficiency, low emissions, and quiet operation.

Overview

Industrial Power Generation

This industrial-grade diesel generating set features a robust four-stroke, water-cooled engine design engineered for reliable performance in demanding environments. Its compact construction ensures efficient space utilization while maintaining high power output capabilities. Equipped with advanced electronic speed control and a comprehensive monitoring system, this unit provides stable and dependable electricity for both continuous and standby applications.

Technical Specifications

Engine Type	4-stroke, water-cooled
Control System Voltage	24 VDC
Filtration Components	Diesel Filter, Oil Filter, Dry Air Filter

Performance Features

Performance Metrics

240 kW

Power Output

300 kVA

Apparent Power

Control and Connectivity

- Electronic speed control system
- Flexible connectivity options
- Comprehensive monitoring and protection
