

# Diesel Power Generating Sets for Power Stations

High-performance diesel generating sets designed for power station applications. These robust and reliable generators provide a stable and efficient power supply for critical infrastructure and industrial operations.

## Overview

### High-Performance Power Generation

These diesel generating sets are engineered specifically for demanding power station environments, providing reliable and stable electricity for critical infrastructure. The system includes advanced protective features such as high-temperature monitoring, oil level management, and low water level protection to ensure operational safety. Designed for durability, these units are suitable for both primary power generation and essential backup solutions.

## Safety & Protection

### Integrated Protection Systems

- High-temperature protection
- Oil level monitoring
- Low water level protection
- Signal-based protection action

### System Status

Automated Protection, Signal Monitored
