

Diesel Powered Concrete Pump

This concrete pump is powered by a diesel engine. It is mounted on a trailer for easy transport and precise concrete placement.

Overview

High-Performance Concrete Pumping Solution

The HBT7008A-140S Diesel Powered Concrete Pump is a robust construction machinery solution engineered for efficiency and reliability on demanding job sites. Mounted on a mobile trailer chassis, this unit offers exceptional maneuverability for various applications, including building foundations, bridge construction, and road paving. It features a high-capacity hopper and a powerful pumping mechanism designed to deliver precise concrete placement consistently.

Technical Specifications

Model Number	HBT7008A-140S
Power Source	Diesel

Key Performance Metrics

Performance Highlights

70 m³/h

Theoretical Output

8 MPa

Max Pressure

Features

Design Features

- Trailer-mounted for easy transport
- Large capacity concrete hopper
- High-performance pumping mechanism
- Engineered for site maneuverability

Suitable Applications	Building Foundations, Bridge Construction, Road Paving
