

# Diesel Water Pump for Irrigation and Dewatering

This diesel water pump is designed for high-volume water transfer in agricultural, construction, and industrial applications. Its durable cast iron construction and reliable diesel engine ensure efficient and reliable operation for various water pumping needs.

## ADDITIONAL IMAGES

## Overview

### High-Volume Diesel Water Transfer

This robust diesel-powered water pump is engineered for high-volume transfer in demanding agricultural, construction, and industrial environments. Featuring a durable cast iron construction and a reliable single-cylinder engine, it provides a cost-effective solution for irrigation, dewatering, and emergency water removal. The unit includes essential safety features like a low oil shutdown system to ensure long-term engine protection and consistent performance.

## Performance Metrics

### Key Performance Features

**1 Cylinder**  
Engine Type

**1 Capability**  
Self-Priming

## Technical Details

Pump Type	Self-priming centrifugal pump
Engine Power Source	Diesel
Construction Material	Cast Iron

## Safety and Maintenance

Safety Systems	Low oil shutdown, Durable frame
----------------	---------------------------------

## Applications

### Primary Applications

- Agricultural irrigation
- Construction site dewatering
- Emergency water removal
- General water transfer
